

Step Replacement Checklist

This sheet has been created to help you, the customer, assemble the information that will be required for Concrete Inc to provide a quote to replace your existing steps. We offer all of our customers a site check at no charge (within our delivery grid) with a step replacement order to confirm all dimensions are correct and that site access is not an issue. If you need clarification on any of the below questions, please don't hesitate to contact us directly and we will be more than happy to walk you through it.

1. What type of step do you have currently (precast, wood, etc)?
2. What year was your home built?
3. Will your basement finished or unfinished by the time of install?
4. What are the dimensions of your current steps landing pad (the platform you stand on)? We will need the width (the dimension from left to right) and the depth (the dimension from front to back).
5. How many risers are on your existing step (count up from the bottom riser up to and including the landing)?
6. Can we get our picker trucks within 25' from your steps location with ease (no trees, etc in the way)?
7. Do you have railings on your existing step you would like to reuse or would you like new railings?
8. Do you have an overhang that may cause access issues?
